

INTRODUCTION

- Term Life Insurance is a type of life insurance that provides financial protection to the insured person for a specific period called the *term* (e.g., 10, 20, or 30 years). If the policyholder dies during this term, the insurance company pays a fixed amount called the *sum assured* to the nominee.
- In this project, we create a C-based computer program to store customer details, calculate policy premiums, manage payment information, and check policy status. The program helps insurance agencies efficiently manage term-life policies in a simple and structured manner.
